

Figure S22. The effects of mir93 on cell proliferation

Cell proliferation was measured with the MTT assay. 200-500 cells from Control and DOX-treated groups were seeded in 96-well culture plates and were cultured in the absence (CTRL) and presence (DOX) of DOX for 7days. Data represents means SEM, $n = 5$. *p<0.05; Error bars represent mean \pm STDEV.
